GN 6471.3 Connecting Strips	QVX
GN 6473.2 Connecting Elements	QVX

Side guides GN 6472 are installed in the middle of conveyor sections and their rollers guide the conveyed goods without damage. The type of rollers used depends on the conveyed material. Type K is used for cans and plastic boxes. For cardboard boxes, type Z can be used for an even material flow. For containers of glass, type ZA is used since it allows easy removal of any contamination due to glass breakage. Side guides are fastened on the top side via the T-slot. Connecting element GN 6473.2 can be used for this purpose, for example. The side guides are delivered in packaging units of 2 pieces each. They can be shortened at increments of 120 mm in consideration of the installation situation.
